Management ROI report

Snapshot: 2026-10-27T00:00:00+00:00

Selected period (days): 90

Open recommendations — forecast-based estimates of what is at stake

Revenue at risk on open recommendations: INR 10,000.00

Forecast demand that current stock would not cover over each open order's protection window, valued at selling price. An estimate of what is at stake.

Cost of open recommended orders: INR 10,000.00

Recommended units x unit cost for open purchase recommendations.

Estimated when you approved — not observed savings

Working capital below the spreadsheet baseline (estimate at approval): INR 12,600.00

For approved purchase orders: (baseline units - units approved) x the unit cost frozen on the recommendation. Baseline = P90 demand over the full lead-time + review window. It becomes a saving only if the order is placed and received as approved, which Sanket does not record.

Carrying cost implied by that difference (derived — not additional): INR 362.47 (Derived; do not add)

The working-capital difference x the holding-cost rate, pro-rated over each order's protection window. Derived from the line above; adding the two double-counts.

Revenue at risk covered by approved orders (estimate): INR 10,000.00

Forecast demand stock on hand would not have covered, valued at selling price, for each approved order. Revenue, not profit, and not observed sales.

Approved orders on SKUs with an open shortage alert: 0.0 count

Approved purchase orders whose SKU had an open or acknowledged shortage alert when the recommendation was generated. A count of approvals, not of stockouts avoided: whether a stockout was avoided is not observed.

Observed outcomes

Realised savings: Not measurable yet

Not measurable yet. Sanket records approvals, but no supplier order, goods receipt or post-order sell-through, so no saving or avoided stockout has been observed. Measuring it needs those records, compared against the baseline for the same weeks.

Estimates use the inputs frozen on each recommendation. Approving a recommendation is a decision, not an outcome: none of these figures is money saved until orders, receipts and sales confirm it.
